

Your new lever taps don't finish square when turned off?

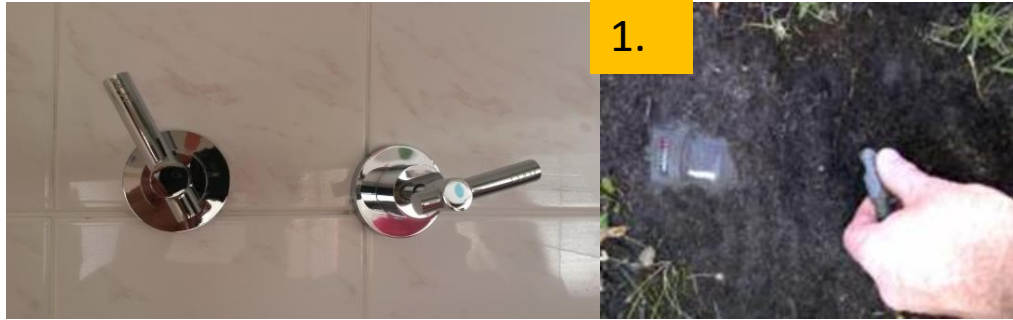

EZYFIX Trouble-shooter:

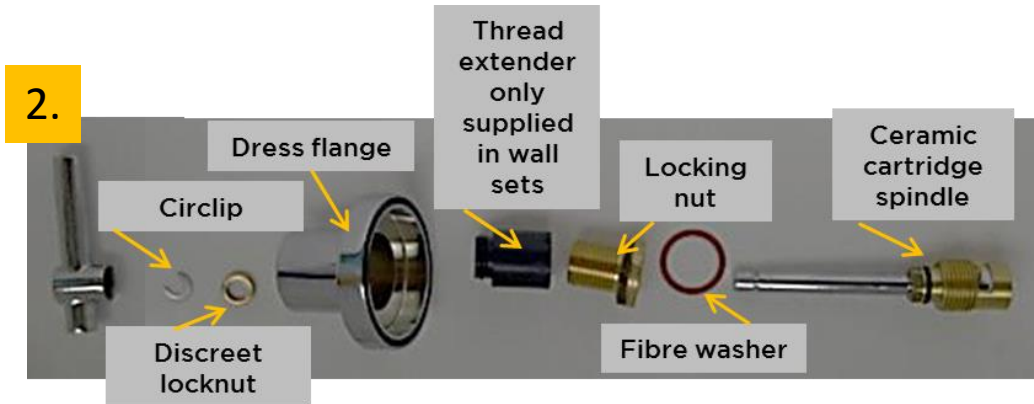

This guide provides a solution that can be used on both wall and hob mounted modern lever tap sets.

Here's the solution...

1. Turn off water mains
2. Remove the Handle, Circlip, O-ring, Discreet locknut, Dress flange, Locking nut, Fibre washer and ceramic cartridge spindle as pictured.
3. Re-install just the ceramic cartridge spindle and gently tighten the hex nut on top of cartridge.
4. Turn on mains.

5.

Hex nut on ceramic cartridge spindle

5. Assemble on the hot and cold lever handles only and turn to the off position for both. If water still comes from spout or shower outlet then tighten a little more. A small amount of water may be coming from around the cartridge in the wall or basin, this is okay as when you install the fibre washer and locknut this will stop the leak.

6.

6. Now tighten the hex nut on the ceramic cartridge until your handles are square.

7.

7. Now re-assemble the taps, job done!
