

TROUBLESHOOTING GUIDE

FLANGES WON'T SCREW DOWN

TOOLS FOR INSTALLATION

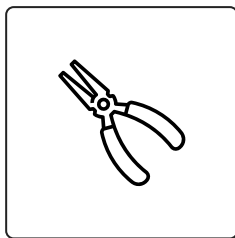

For installation, you'll need an adjustable spanner and pliers to help secure and tighten your EZYFIX tapware.

Inside the box you'll find the Modern Lever Taps, cartridge assemblies, spindle extenders, anti-vandal spanner, and locking nuts.

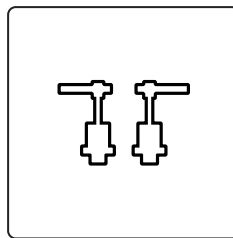

To remove your old tapware, you may also need a clear silicone, cloth, and pliers to help loosen and access tightly fitted or hard-to-reach components.

BASIN OR TAP FLANGES WON'T SCREW ALL THE WAY DOWN?

This guide provides a solution that can be used on both modern and classic styled hob type sets.

HERE'S THE SOLUTION

If this happens, then the simple solution is to lower the entire basin tap body assembly.

1

Remove tap components

1. Remove all buttons, handles and flanges and loosen body locknut above the basin.
2. Loosen the body locknut below the basin.
3. Push down on the basin body, so it moves the distance required to remove the gap beneath the flange.

**2**

Adjust tap position

1. Push down on the basin body, so it moves the distance required to remove the gap beneath the flange.

**3**

Job done!

1. Re-tighten the bottom tap body locknut and then the top locknut.
2. Finally re-dress the tap.
