

INSTALL GUIDE

WATERFALL SPOUTS

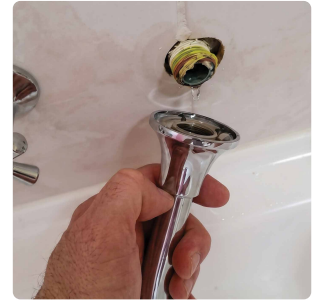

STEP-BY-STEP INSTALLATION

1

Unscrew old spout

1. Firmly grip the body of the old spout with your hand. Rotate it to unscrew it from the wall connection.
2. Once fully unscrewed, pull the spout away from the wall.

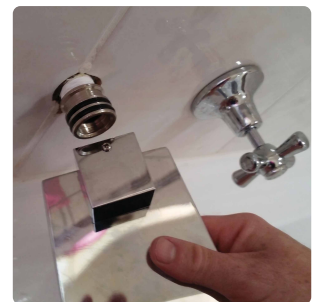

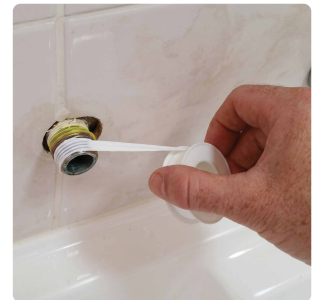

EZYtip: If the spout is stiff to twist and hard to remove a rubber strap wrench is ideal for undoing them as shown. Another way is to insert a screw driver into the outlet and use it as leverage to undo it.

2

Prepare your new spout

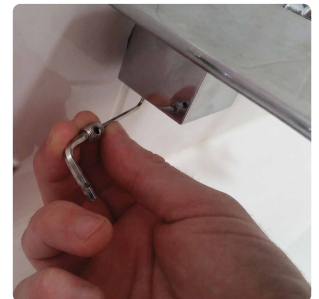

1. Apply thread seal tape to the thread sticking out of your wall.
2. Screw outlet on to the end then loosed grub screw beneath.
3. You can now pull the spout off and wind the adaptor on as close as possible. A large allen key can be used to wind on the adaptor. This process avoids your tiles being scratched by the spout if the plumbing is not square.

3

Fix on your new spout

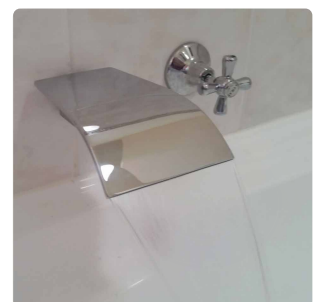

1. Once the adaptor is as close to the wall as possible, push the spout back on.
2. Once level re-tighten the grub screw to hold the spout in place.

4

Job done!

EZYtip: These instructions show the Carribbean spout. However, the process is the same for all waterfall spouts in the EzyFix range.
